5inch SATA hot swappable drive bays with two more 3.5inch bays inside. The toolfree design makes adding drives literally a snap. The case is also large enough for ATX, mATX and EATX motherboards. It also offers audio, USB and IEEE1394 connections on the front panel. Thermal management is key in the 800D. The motherboard, power supply and hard disk drives are all separated into individual compartments to prevent heat contamination. The three included 140mm fans circulate air from bottom to top to ensure the lowest temperatures. The back plate promotes more airflow with convenient cable management cutouts, reducing the clutter inside your case. Smart and elegant, the Obsidian 800D is a computer case that will make any PC enthusiast proud. Own it today! Unique cable routing holes guarantee a clean and clutterfree installation. Up to seven fans for outrageous cooling potential. Toolfree optical drive installation makes building a system faster than ever. Oh and its nice and sturdy. If you are concerned about needing room in the case and want a great case, I would definitely recommend you consider it. We thought about buying another motherboard to go in it. Joke But I love the room. Love how it has the side to hide all the cables and when I look inside everything looks nice and neat. And speaking of plastic i had to move so I packed the tower back in the original packaging and a corner of the plastic cracked not a big deal but just putting it out there. The case is very easy to work in and is very sturdy, you certainly get what you pay for. You can also fit an EATX board in it without a problem. Some people may have problems with power cables being long enough and I ran into a problem with the cover for the front USB ports not opening fully because the space between my bluray drive and it was too close, though I just ended up moving the drive to the slot below it. Its also too long to fit on top of any desk that I own. This case is HUGE and the extra space doesnt go to waste. <http://www.toscanasempres.com/writable/public/userfiles/firepower-2000-manual.xml>

Excellent cable management, and designed with the enthusiast in mind. The hot swap drives are great, except for one fairly annoying issue which I'll go into more detail about in a bit. Tons of room for expansion and extra cooling should you need it. Never had a case where taking the panels off was such a breeze, elegant solution to a historically annoying process. While there is support for installing SSDs, the BIOS could not detect both SSDs and HDDs simultaneously. I had to mount the SSD elsewhere in the case, which was somewhat annoying. Is this a genuine highend enclosure, a bomb shelter, or a mess of sheet metal.

<https://www.informaquiz.it/petrgenis1604790/status/flotaganis22052022-2214>

We put the case through our bevy of tests. This time around Ill be a bit more serious. Dont expect to be bored, though. Im still testing the companys latest effort in two completely different use cases. The first challenges the 900D in its stock configuration with two of the warmest Opteron processors I could find and two hotrunning FirePro W9000 graphics cards. Its amazing how much heat you can kick out using OpenCLenabled benchmarks on highend hardware like this. But our efforts dont end there. After benchmarking the first configuration, I swapped out all of the case fans, installed a fan controller and water cooling system, and replaced the Opteronpowered workstation with a highlyoverclocked gaming setup. Why You only live once. Thats why. I enjoyed another benefit, too. Because the Obsidian 900D is more massive than a modern race cars chassis, manhandling this enclosure as I installed and removed highend hardware scored me some serious cardio. Im pretty sure I gained half an inch around each of my biceps, too. Who needs a gym when Corsairs Obsidian 900D is beckoning. Shipping Box and Unpacking Truly, this case presents a physical challenge for everyone, including the delivery guy who Im pretty sure hates me at this point. Fortunately, the cardboard box looks more massive than the enclosure inside really is. Understandably, Corsair is concerned that external stresses could lead to minor deformations of the oversize chassis. In the event that rough shipping does affect the Obsidians integrity, you might find it difficult to close the lower doors. I put the 900D through my familiar tilt test, though this time with the goal of straightening out the case, and I succeeded. The white specks you see in the pictures dont come from paint imperfections, but rather a powder that clings to the paint. I dont blame Corsair for the bumps our Obsidian took on the way to our German office. After all, more crossbeams would make the 900D even heavier.

<http://ladylordwest.com/images/95-jeep-grand-cherokee-laredo-owners-manual.pdf>

The company claims that retail versions of the Obsidian will benefit from a change in packaging that should prevent similar issues. And who knows Maybe someone in German customs is to blame. Even as UEFI-equipped boards become more common, a majority still sport a speaker header for error diagnosis. Also, don't search the accessory box for an ATX12V extension cable; it is already mounted at the rear of the motherboard plate. The instruction leaflet that came with our sample was a folded sheet of paper. That's hardly what we expected to guide us through the features and assembly of a flagship enclosure. For instance, there weren't any instructions on how to remove the top cover. Again, though, Corsair promises us that retail boxes will include more comprehensive instructions. Workstation-class rig is up to the challenge for exploring 900D abilities, but gaming rig. You slap off-the-shelf closed loop watercooler on the midrange CPU TDP wise, one simple GPU and call it watercooled system. Point is for such class of case you put low-end gaming rig. It doesn't tell us will it perform if serious system is inside. If the case performs with high-wattage rig, it will do for any smaller one, but not necessarily the other way around. Quiet, strong 200mm fans provide excellent airflow, and innovative cable routing, eight expansion slots, native SSD support for up to six drives, an external hotswap dock for quick data access, and easy-to-remove dust filters add to the list of features that make the 650D the best choice for your next PC. 100-Word Product Description The Obsidian Series 650D seamlessly melds great features with a subtle, elegant appearance.

<http://lamda-maritime.com/images/95-jeep-cherokee-sport-owners-manual.pdf>

An allblack painted steel structure provides a strong frame while a beautiful brushed aluminum face adorns the front of the chassis. The 650D features all the elegance of its bigger brother, the awardwinning Obsidian Series 800D, but in a smaller, midtower package, making it easier to transport and store. Quiet, strong 200mm fans provide excellent airflow, and innovative cable routing, eight expansion slots, native SSD support for up to six drives, dual radiator compatibility, an external hotswap dock for quick data access, and easyto remove dust filters add to the list of features that make the 650D the best choice for your next PC. Product Features Dual 200mm fans provide outstanding cooling for even the hottest components. Easily accessible dust filters make maintenance simple and hasslefree. Quickrelease side panels make it easier than ever to upgrade your hardware. Integrated fan controller lets you quickly adjust cooling performance and noise levels. Four toolfree optical drive bays and up to six SSDready hard drive trays provide plenty of expansion. CPU backplate cutout makes it easy to upgrade your CPU cooler. Brilliant cable routing system provides a way to keep your system neat and tidy. Adjustable drive cages can be removed and relocated to accommodate large video cards. I Room for long power supplies gives you peace of mind for future upgrades. Eight expansion slots give you tons of room for multiple graphics cards. External hotswappable SATA3 dock provides a quick way to copy data to and from 2.5" or 3.5" SATA drives.
